

WHAT YOU NEED TO KNOW TO OFFER YOUR PATIENTS THE BEST SURGICAL CARE

For Effective Surgical Implant Selection, Follow These Guidelines.

Biocompatible

How safe is the implant?

Strive for a low- to no-complication rate.

Possible complications:

- Rejection
 - Patient's body rejects the implant
- Infection
 - High rate of infection after implant placement
- Migration
 - Implant moves from its appropriate placement
- Exposure
 - Strive for little to no exposure rate

Easy to Use

An easy-to-use implant will save you time and surgical resources.

Ease-of-use Characteristics:

- Anatomically correct
 - Meets your patient's contours
- Malleable
 - Easily bends and holds its shape
- Easy to cut and trim
 - Trimmable to your exact specifications
- Easy to pass through and suture
 - Is sufficiently porous to suture while maintaining a solid and stable integrity
- Sterilization
 - Delivered sterile and ready for use.
- Accessibility
 - Personalized customer service and fast turnaround time

Trusted & Innovative

The latest technological advances that retain steadfast quality.

Cutting-edge qualities:

- Insert screws directly into the implant without the need for a plating system
- Directly impregnate the implant with antibiotics to lower the risk and chance of infection
- Ensure as-intended use without reliance on off-label practices
